The Manual of WT5001-48L Chips and Modules

1 • Product description and features

1.1、Description of WT5001 chips and modules

WT5001-48L is a high-quality OTP MP3 voice chip,with 8-BIT CISC,supports MP3 decoding; with a rich peripheral interfaces: a SPI; can drives 16Ω headphones; with real-time clock and calendar clock modules; standard RS232 serial controlling; low power consumption; standby current 80uA; fast response of controlling and playing, superior in similar products; suitable for the occasions where need to replace the voice or where a long time, high quality voice are required.

WT5001M01-16P, WT5001M02-28P,WT5001M03-28P and WT5001M04-14P are all high-quality and stable semi-finished modules developed as WT5001-48L is the master chip. This series of modules have the minimum system functions of the WT5001-48L, come with the SPI-FLASH as a storage medium, 1W amplifier; serial port controlling functions, download music files online. Based on this, each has different features, and is flexible with the secondary development in a variety of situations or used directly.

▲ Our Company can provide development of various functions for customers.

Note:The manual suit for :WT5001M01-16P V1.2 module、WT5001M02-28P V1.4 module and WT5001M03-28P V1.3 module. Please go to check corresponding content for detail function of each module .

1.2、Applications

WT5001-48L chips and it's modules can be used in automotive electronics (anti-theft alarm, reversing radar, GPS navigation system, electronic dog, central lock), intelligent home systems and home burglar alarm, voice navigation of medical instruments, personalized voice player, household appliances (cooker, rice cooker, microwave oven), entertainment devices (amusement machine, voice advertising machine). learning model (early childhood education, children's audio books), intelligent transporting equipment (bus stop, parking systems), industrial control field(elevators, industrial equipment), voice instructions, fault code language interpreter, toys and other fields.

Suitable for the occasions where need to replace the voice or where a long time, high quality voice are required

1.3、WT5001-48L voice chip features

Core ·8KB OTP ·8-BIT CISC;

MP3/WAV Decoder

·Can directly drive 16ohms earphone,

SNR=93dB

·Support MPED1/2/2.5 Layer3, support MP3 decoder

·16Kbps~320Kbps bit rate and 8KHz~44.1KHz sample rate MP3 and WAV two format file

Can only support MP3 format file in SPI-FLASH, in SD card or U-disk can support MP3 and WAV two format files 32-level volume adjustable

SPI

·One SPI interface, support SPI-FLASH offline download audio file; ·Support 4M、8M、16M、32M and 64M SPI-FLASH ·Play voice content in SPI Flash by default when powered on ·Store mode:SD card, U-disk, SPI FLASH

SD Host Controller

•FAT16,FAT32 file system; •Support maximum of 2Gbyte capacity SD card,can control to directly play SD card •Can copy voice content to SPI-FLASH from SD card

USB Host/Device

·2Gbyte store medium,can control to directly play U-disk content

Can offline copy U-disk content to SPI-FLASH

While copying, can change power-on play mode via set up iSound.mp3 fiel: power-on auto play or not, single circulate or not, all track circulate or play random;

Function Key:

•Three copy mode:Key powered-on copy、Dual-key copy(Hold press A、B Key simultaneously) and serial port command copy;

Key copy function key has key power-on copy and key selet play function

 $\cdot A_{\sim}$ B mode function key: A \sim B mode switch function

Note:

A mode:Each trigger,will play the current track.

B mode:Each trigger, will play the next track, and return the first track if the current track is the last track, that is all track play circulate

·4 keys, one key corresponding to one sound ,two play circulate mode can be selected

ADC key, supports 5 standard MP3 function key, achieve one pin to control multiple keys .

UART

·Standard UART communication interface, default baud rate is 9600(nonsupport the other baud rate)

Can through MCU and PC serial port command control, efficient and stable communication

Can control to insert music playback

·Can control combination successive playback

·RTC set,can set timing

·Fast respond of controlling playback, superior to similar products

With E2PROM memory setting mode, power-on auto recognition mode. Switching mode, indicator flash mean that switch sucessfully, then BUSY step down.

Comes with reset module internal

·RTC real-time clock and permanent calender clock module function

One BUSY signal output pin, output high level when playing audio,otherwise output low level

Can be flexible for supporting various of voice development solution

Sleep and Awake

Sleep:DATA5 receive 2sec high level, the IC will enter into sleep mode

·Awaken:When IC in sleep mode, DATA5 receive high pulse,IC will be awaken.

Package

·WT5001-48L IC: TQFP48 ·Module:DIP14、DIP16 and DIP28

1.4, Feature details of WT5001-48L voice chips and modules

WT5001-48L voice chip is a powerful OTP voice microcontroller chip. WT5001-48L makes that voice chip no longer find suitable external microcontroller circuit for the way of controlling, highly integrated single-chip technology is sufficient to replace the complex external controlling circuit. The operation is simple and easy to understand, the time of using and secondary developments are greatly reduced.

SPI Download online: Download through the downloader and the compile software, download the music to the SPI-FLASH simply and easily. The downloader is easy to use, and the compile software is convenient to operate.

ADC standard keys: An interface can control five keys , save I / O resources; fully ingratiate the function of MP3 in market, that play / pause, stop, last song, next song, volume +, volume - and so on;

Press to copy function keys: The normal key function is: short press, for the next one, when play the final song, back to the first song, and the playing mode is single cycle mode; long press, is copy function when power-on, first press the key and hold before power-on, after 5sec power on, BUSY indicator flashes (said to enter the copy), release the button until the BUSY indicator stop flashing and darken, copy success.

WT5001 voice chip and modul

A S B mode function keys: Short press A key to select previous song, long press A key for 3sec to set to A mode; short press B key to select next song, long press B key for 3S to set to B mode, the key is active low. Model A: auto play current songs (Memory) each time when power-on, play it once and stop. Mode B: play the next one (Memory) each time when power-on, play it once and stop; when play the finial one power-on, then start to play the first one when power-on next time.

One-to-one function key: When DATA14 is high, DATA16 \ DATA17 \ DATA18 \ DATA19 corresponds to 1, 2, 3, and 4 pieces of voice, low pulse trigger and play once then stop. When DATA14 is low, DATA16 \ DATA17 \ DATA18 \ DATA19 correspond to 1, 2, 3, 4 pieces of voice, when low to maintain ,the playing mode is single cycle, when jump to high it will finish the current song then stop.

UART serial port control: Standard serial port communications protocol ,by sending a command to control that: specify music file to playback, switch memory, switch cycle mode, music insertion, a combination of songs to playback, set and read RTC, timed wake-up trigger, etc.;

iSound.mp3 setting: New a iSound.mp3 file,put it in the final position following all sound files in SD card,then copy to SPI-FLASH ,along with all the others,then can set up whether power-on auto playback of FLASH music and track such cycle mode

Sleep and awake: Sleep: When DATA5 receive 2sec high level,IC enter into sleep mode;awake: when IC in sleep mode,DATA5 receive a high impulse, IC awaken

2、Selection Guide

2.1、Function Table

5. Detailed description of the functional operation

The below function decription is for WT5001-48L, Module includes all the function of WT5001-48L, so please go to "4、 Detailed Description of The Pin Assignment Diagram" to refer to module's function .

5.1、 BUSY indicate output

There is an output signal BUSY, when there are audios playing, the output will be high, and be low as normal.

			· · · · · ·
	Key	Operation	Function and operation
		Short press	Play\Pause
	FLAT	Long press	Stop
		Short press	Select next song
	NEXT	Long press	Fast forward (when playing)
	LAST	Short press	Select previous song
		Long press	Fast reverse (when playing)
		Short press	Volume increase
	VOLT	Long press	Volume increase rapidly
	VOI	Short press	Volume decrease
	VOL-	Long press	Volume decrease rapidly

5.2 Function detail of ADC standard key mode

5.3, Function setting description

5.3.1、Setting method

There is an iSound.mp3 document in SD card .Copy all mp3 files in SD card to SPI flash to operate, while all the configurations in iSound.mp3 file is updated to the SPI flash, the specific storing location as below.

Note: you can open iSound.mp3 file on the computer by "WordPad", modify the setting parameters inside. Please don't mistake the uppercase and lowercase of the"ISound.mp3" file name.

5.3.2、Function detail

Setup as below:

sp00//,Power-on Auto Play Setting. "sp"is lowercase, "00" indicates Power-on Non Auto Play, "01" indicates Power-on Auto Play;

cl00//,Play Mode Setting. "cl" is lowercase, "00" indicates single track non cycle. "01" indicates single track cycle, "02" indicates all tracks cycle, "03" indicates play randomly;

cfxx xx xx//, user defined. User can read the 4 bytes through serial port command . "cf" is lowercase,the "xx" following "cf" indicates 0~F hexadecimal character, "xx"indicates one byte, there is one blank space between two bytes, such as "cf23 A0 CE 78";

Through serial port send command "7E 02 C7 7E", return "C7 23 A0 CE 78" (hexadecimal) Note: Followed "cf", can maximum write 4 bytes character size, there is no blank space between cf and the first character,but there is one blank space between two bytes; if there are less than 4 bytes after "cf",send code, still

w Shenzhen Balway Electronic Technology Co., Ltd.

WT5001 voice chip and modul

return 5 bytes character size (includes "C7"), that means non-filled bytes was make up by "FF", such as set up "cf23 A0 C", return "C7 23 A0 CF FF". Setup refer to below figure :

sp01// c102// cf23 AD CE 78//

Application example:

sp to set power-on play, cl to set play mode, in the user definition data after cf, the first byte can be defined as volume, the second and third bytes defined as power-on play track, the fourth bytes set to whether sleep or not. User read definition data through serial port, and setup corresponding function according to the data.

5.3.3 \ ISound.mp3 file storing location

ISound.mp3 files must put at the final storing address of SD card or U disk, that is the final to deposit to the SD card or U disk (the final of index sequence).

5.4、 SPI FLASH copy function

5.4.1、Method of mass production

Edit the project file by PC software, programmed into the SPI FLASH directly.

5.4.2, Copy method of SD card or U-disk

First edit iSound.mp3 file, copy it to SD card or U disk, and then copy the voice file you want to put in SD card or U disk in order, finish it; through three operating methods copy to SPI-FLASH, (default the original mode unchanged if there isn't iSound.mp3 file)

1>Press the key for 5S when power on, the red light BUSY flash that it will start to copy then release the key, red light BUSY flash until the copy ends.

2>Long press the A key and B key for 5S, the red light BUSY flash that it will start to copy then release the key, red light BUSY flash until the copy ends.

3>The MCU send serial commands to achieve copying, BUSY light indicates as the first method, when finish the copy, the serial port output an instruction, the specific instructions see agreement below.

Note: The sequence of the music files copied to the SPI-FLASH is the order of the file address stored in SD card or U disk, which is index order of the file in SD card or U disk.

5.4.3, The order of music file stored in SD card:

As the order of file address in SD card is the order of index, that is, who is the first to copy, whose memory address is at first. And the order of WT5001-48L playing music in SD card is in accordance with the order of the memory address in SD card, so be clearly that the order of the file in SD card which WT5001-48L specify to playback with, the first that you must store the file in SD card in order as planed. The following is the method to store files in SD card:

Build a file folder on your computer , to place the music files which will be stored in SD card, and make them in good order (if you want to know the files order clearly , you can add to each music file name with "0001-9999", such as 0001 the Motherland mp3, 0002 love story. mp3, rank in the order of the file, Select all the music files which will be stored in SD card, such as CTRL + A ", and then right-click the first file, select "sent to the removable storage (SD card or U disk), so the order of music files in SD card is desired.

Note: the order of music files stored in the U-disk is similar as in SD card.

5.5 ${}_{\mathrm{V}}$ Description of specific function:

5.5.1, Press to copy function keys

The normal function of the key (DATA22) is: short press, is for the next one, when play the final song, back to the first song, and the playing mode is single cycle mode; long press, is copy function when power-on, first press the key and hold before power-on, after 5S power on ,BUSY indicator flashes (said to enter the copy), release the button until the BUSY indicator stop flashing and darken, copy success.

5.5.2. One to one function key

When DATA14 is high, DATA16 \ DATA17 \ DATA18 \ DATA19 corresponds to 1, 2, 3, and 4 pieces of voice, low pulse trigger and play once then stop.

When DATA14 is low, DATA16 \ DATA17 \ DATA18 \ DATA19 correspond to 1, 2, 3, 4 pieces of voice, when low to maintain ,the playing mode is single cycle, when jump to high it will finish the current song then stop.

BALWAY Shenzhen Balway Electronic Technology Co., Ltd.

5.5.3 A B mode function key

As B keys are set two different operating modes: Short press A key (DATA21) to select last song, long press A key (DATA21) for 3S to set to A mode; short press B key (DATA20) to select next song, long press B key (DATA20) for 3S to set to B mode, the key is active low. When there is an EEPROM, it can remember the operating mode, identify the mode automatically when power on. As switching the mode, the light flashes indicate switching success and BUSY goes low.

Model A: auto play current song (Memory) each time when power-on, play it once and stop.

Mode B: play the next one (Memory) each time when power-on, play it once and stop; when play the finial one power-on, then start to play the first one when power-on next time.

Note: when using A, B mode, there must be the EEPROM to memory power-down.

5.6, Description of storage

5.6.1、Stored format

The storage of SD card and U disk supports FAT16, FAT32 file system.

5.6.2、Memory power down

Memory store to the EEPROM when power down that is a standard function, memory power-down include volume value, the current playing song number and the setting of A, B mode referred below; when there isn't external EEPROM, it will be no memory processing when power down ,but can not affect other functions;

5.7、Sleep and awake audio process function

IC sleep and awake controlled through I/O port(DATA5), detail as below: Sleep: when DATA5 receive 2sec high level, IC enter into sleep mode; Awake sleep:When IC in sleep mode, when DATA5 receive a high pulse, IC was awaken

5.8、Process audio files

Support MP3, WAV format audio files. (in SPI-FLASH,do not support WAV format audio files); If the MP3 files store in SPI-FALSH, it should be lower bit rate MP3 format files. 6Kbps~320Kbps bit rate MP3 file and 8KHz~44.1KHz sample rate WAV file

Note:Most voice quality of voice chip depend on audio itself sample rate and bit rate,WAV with more sample rate,the voice quality is better; MP3 with higher bit rate, the voice quality is better. It is recommand to use COOL EDIT PRO、ADOBE AUDITION、GOLDWAVE or TTPIayer such professional audio software to convert sample rate or bit rate.Then it can be realized good performance.

6 Serial communication control protocol

Choose a available serial port, set up RS232 parameter correctly, setup as below:

6.1、Protocol command format

Start code	Length	Opcode	Parameter	End code
0X7E	See below	See below	See below	0X7E

Note: The "length" refers to the length + opcode + the length of parameter, as follows 12.2.2 the command that specifying the file in SD card to play, of which the length is 4 bytes.

6.2、Write instruction

6.2.1, Format of code returned from writing instruction

Note: After perform each writing command, return to one byte operation code corresponded to the command.

SALWAY Shenzhen Balway Electronic Technology Co., Ltd.

6.2.2、Specify the files in SD card to play

This command can specify the files in SD card to play, it doesn't effect by the order of files stored.

Start code	Length	Command	High bit of songs	Low bit of songs	End code
7E	04	A0	00	01	7E

6.2.3、Specify the files in SPI Flash to play

This command can specify to the files operate only in SPI Flash.

			5		
Start code	Length	Command	High bit of songs	Low bit of songs	End code
7E	04	A1	00	01	7E

$6.2.4\,{\scriptstyle \ensuremath{\scriptstyle \times}}$ Specify the files in U disk to play

This command can specify the files to operate only in U disk.

Start code	Length	Command	High bit of songs	Low bit of songs	End code
7E	04	A2	00	01	7E

6.2.5、Pause

Start code	Length	Command	End code
7E	02	A3	7E
		1.0 1.0	•

Sending the command first time to pause the music, send the data again, continue to play music from the suspension.

6.2.6、Stop

Start code	Length	Command	End code
7E	02	A4	7E

Sending the command to stop the current song.

6.2.7、Next song

Start code	Length	Command	End code
7E	02	A5	7E

The instruction trigger to play the next song, when playing the first song, sending the command can trigger to play the final music.

6.2.8、Previous song

Start code	Length	Command	End code
7E	02	A6	7E

The instruction trigger to play the previous song, when playing the final song, sending the command can trigger to play the first song.

6.2.9、Volume control

The volume levels are total of 32, from 00 to 31, which 00 is mute, 31 is maximum volume.

Start code	Length	Command	Volume level	End code
7E	03	A7	1F	7E

The command in example is to send a maximum volume 31, this instruction can adjust the volume in real time, and the volume can be in memory power-down (with EEPROM).

6.2.10、Combine to play

This command can specify certain files to play continuously in the current directory

Start code	Length	Command	High bit of songs	Low bit of songs	End code
7E	04	A8	00	01	7E

The combination of playing is sending 10 groups or less music combination code to the WT5001-48L continuously, WT5001-48L play the music according to the sequence of code received. Different from sending name to control directly is that the next code can not interrupt the playing until finish the current song , receive the command to do FIFO processing. Example : WT5001 continuously receive "7E 04 A8 00 08 7E ","7E 04 A8 00 06 7E ", "7E A8 04 00 07 7E "," 7E A8 04 00 04 7E "," 7E 04 A8 00 03 7E ","7E 04 A8 00 02 7E " six sets of data, WT2801-S specify to play SD files named" 0008.mp3 "," 0006.mp3 "," 0007.mp3 "," 0004.mp3 ","0003.mp3 "," 0002.mp3 "6 audio files in order.

Note:

A, Before the combination of playing, if you want to play other mode of files stored, you must first send the specified storage mode playing command, the track in instructions fill in the first one of the combination of playing, and then send the tracks behind in the instructions, to realize combine to play.

B, Combination of playing only in the non-cyclic mode, is invalid in the single cycle mode or all songs cycle mode,; C, The continuous combination is maximum 10 groups. During playback, if there is a new command it can be interrupted, and implement the new command.

6.2.11、Set playing mode

	Start code	Length	Command	Parameter	End code
--	------------	--------	---------	-----------	----------

(2)						
BALWAY	Shenzhen	Balway	Electronic	Technology	Co.,	Ltd.

WT5001 voice chip and modul

			00: single and no cycle (default)	
75 03	40	01: single and cycle	70	
/∟	03	A9	02: all songs cycle	/ ⊏
			03: random play	

Note: The instruction is to modify the playing mode when power on, when power down, the mode will return to the mode which is configured in iSOUND.mp3 file. Using the instructions, it is proposal that MCU set the mode as initializing the module to realize performing as setting each time.

6.2.12、	Instruction of copy the content from SD card to SPI FLASH	
---------	---	--

Start code	Length	Command		End code
7E	03	AA	00	7E

Note: It will return "AA" immediately after receive the instruction, while the indicator flashes, if copy successfully it will return "AA 00", if not, it will return "AA 01"; the indicator stop flashing when the copy finished. 6.2.13, Instruction of copy the content from U disk to SPI FLASH

Start code Length		Command		End code					
7E	03	AB	00	7E					

Note: it will return "AB" immediately after receive the instruction, while the indicator flashes, if copy successfully it will return "AB 00", if not, it will return "AB 01"; the indicator stop flashing when the copy finished.

6.2.14. Instruction of insertion

Start code	Length	Command	High bit of songs	Low bit of songs	End code
7E	04	AC	00	01	7E

Note: When receive the instruction, the current song will pause, and then execute this command to playback the specified song, when finish playing, it will play the original song which is pause. This instruction only can be implemented in SPI- FLASH.

6.3、Instructions of setting clock

6.3.1、Set data information

Start code	Length	Opcode	Year (2bytes)	Month(1byte)	Day (1byte)	End code
7E	06	B1	2011	05	08	7E

Note: The year, month, day are hexadecimal code, such as the data of 2011 is 07 DB.

6.3.2、Set time information

Start code	Length	Opcode	Hour (1byte)	Minute (1byte)	Second(1byte)	End code
7E	05	B2	20	07	08	7E

Note: The hour, minute, second are shown as hexadecimal code.

6.3.3 Set waking up time information

Start code	Length	Opcode	Hour (1byte)	Minute (1byte)	Second (1byte)	End code
7E	05	B3	0A	05	08	7E

Note: after executing this instruction, the clock of IC will record a time, when it's time to the setting time, DATA0 of IC will output one second pulse signal; after MCU of the controlling side detects the pulse signal from INT, sent the inquiry instruction through the serial port to read the current time, then it will know to perform what procedures this time.

6.3.4, Set information of time period

Note: The first two bytes represent the starting time, the latter two represent the cut-off time.

Start code	Length	Opcode	Hour (1byte)	Minute (1byte)	Hour (1byte)	Minute(1byte)	End code
7E	06	B4	06	05	06	08	7E

Note: The former two bytes indicates start time, the latter bytes indicates the stop time

If there is MCU, this function can be implemented through the microcontroller, so we do not consider to performing any function.

6.3.5 Clear the information of timing

Start code	Length	Opcode	End code
7E	02	B5	7E

6.3.6 Clear the information of time period

Attached list 1-2 Time of copy SD card content and FLASH capacity comparison table(unit:s)

SPI-FLASH	4MBite	8 MBite	16 MBite	32 MBite	64 MBits
capacity	41010115	o Midits		52 WIDILS	04 MIDILS
Time of copy SD	18	7 37	16.5	22.5	37.0
casd content	4.0	1.51	10.5	22.0	51.5

9, Appendix 2: Module and development download tool selection

Attached list 2-1 WT5001 module and development download tool selection

Model	Plug in style and appearance (mm)	Basic performance	Application characteristic	Image
WT5001M01-16P	16P, in-line package 19.5*21.1	1.With 1W amplifer 、 SPI-FLASH; 2.Supply voltage: 3.3V-5.0V; 3.RS232 serial port control、 ADC_KEY key、press to copy key (long press nonsupport);	1.Small size; 2.Easy operation; 3.Update FLASH content need to cooperate with WT8209P01-USB downloader and WT5023P12 test boad	
WT5001M02-28P	28P, in-line package 21.6*36.9	 1.With 1W amplifer 、 SPI-FLASH; 2.Supply voltage:3.3V-5.0V; 3.RS232 serial port control、 ADC_KEY key、 press to copy function; 4.With SD socket、 U-disk pin、 one to one funcion key; 	 1.Free and flexible to change audio; 2.Mutiple function; 3.Come with TF socket, easy application; 	

BALWAY Shen	zhen Balway H	Electronic Technology Co.,	Ltd. WT5001 voic	e chip and modul
WT5001M03-28P	28P, in-line package 18.6*36.4	1.With 1W amplifer SPI-FLASH; 2.Supply volage:3.3V-5.0V; 3.RS232 serial port control ADC_KEY key, press to copy key; 4.With SD card pin, U-disk pin, EEPROM pin;	 Free and flexible to change sound file (But need conect external SD card or U-disk); Mutiple function; With EEPROM, Support power-off memory function; 	
WT5001M04-14P	14p, verical insert mode or contact edg on module 39.7*26.1	 1.With 1W amplier 、 SPI-FLASH; 2.Supply voltage:3.3V-5.0V; 3.RS232 serial port control、 ADC_KEY key、 press to copy (long press nonsupport); 	1.Contact edg on module and vertical insert mode; 2.Easy operation: 3.Change FLASH content need to coorperate with WT8209P01-USB offline downloader and WT5023P12 test board;	
WT8209P01-USB offline downloader WT5023P12 test board	USB、in-line package 26*27 USB、RS232 85*101.9	 1.Downlad sound file to TF card from computer ; 2.Read TF card sound file via USB interface; 3.Can connect with WT5001 test board,download TF card content to WT5001 module; 4.Test WT5001M03-28P module, can connect external TF card socket; 1.Can test all the function of each kind of WT500I module; 2.Cooperate with WT5001 offline downloader to change FLASH content of WT5001 module; 3.Connect external DC9 power supply. 	 1.Can act as TF card reader; 2.Work with WT5023P12 test board to update FLASH content of WT5001 module; 1.Test all function of all kinds of WT500I module; 2.Download and update FLASH content of WT5001 module; 	

10, Appendix 3: Reference solution and module model selection consult

Attached list 3-1 Reference application solution and module model selection consult

	Solution description	Basic requirement	Available component model selection	Remark
Reference solution NO.1	Intelligent toy;	With amplifer,speaker; Button control; High voice quality; No need change audio;	WT5001M01-16P 、 WT5001M02-28P 、 WT5001M03-28P 、 WT5001M04-14P 、 WT8209P01-USB offline downder (production use)、 WT5023P12 test board (production use)	For reference only
Reference solution NO.2	Voice advertisem ent machine;	With amplifer, speaker; Flexible to update audio; Some key control; High voice quality;	WT5001M02-28P、WT5001M03-28P、 WT5023P12 test board (development and test use)	For reference only

BALWAY Shenzhen Balway Electronic Technology Co., Ltd. WT5001 voice chip and modul					
Reference solution NO.3	Voice prompts	Can take amplifer and speaker: Flexible to update audio: Some control I/O port: High voice quality:	WT5001M02-28P WT5001M03-28P WT5209P01-USB offline downloader, WT5023P12 test board (development and test use)	For reference only	
Reference solution NO.4	Electroni voice greeting card;	With amplifer and speaker; Small thickness; Play simple audio; no need update voice; High voice quality;	WT5001M04-14P、 WT8209P01-USB offline downloader (production use)、 WT5023P12 test board (production and test use)	For reference only	

11、Manual Version Record

Version	Date	Description	
V1.0	2011-12-13	Original version	
V1.1	2011-12-22	Add appendix: SPI-FLASH capactiy reference parameter	
V1.2	2012-02-14	 Add WT5001M04-14P"pin assignment description"and application circuit; Add RS232 parameter setting; Modify"6.3.1 set data information"and"6.3.2 set time information"command description; Add WT5001-48L voice chip minimum application circuit diagram (master control); Modify"5.7 Process audio files"description: Add "Appendix 2: module and development download tool model selection"and"Appendix 3: reference solution and module model selection reference"description 	
V1.3	2012-03-13	 In iSoud.mp3 setting,add "cf"character information setting; Add read"cf"character information serial command"7E 02 C7 7E "; Add sleep and awake function; Through DATA5 control; Modify module pin definition, change pin"6"and"28" of WT5001M02 and WT5001M03 "DATA5" and"ENABLE"; Modify corresponding application circuit:
